Pierre Gilbert (1995) speaks of future 'mandatory' jabs and how liquid crystals ([Graphene Oxide?](#)) will take over its host via [electromagnetic radio frequencies](#) (5G?), [contaminating the blood](#) of mankind purposely [causing infection](#), these liquid crystals will become hosted into brain cells, which will become micro receivers of [electromagnetic fields](#) where waves of very very low frequencies will be sent, and through these [low frequencies](#) wave, [people will be](#)

unable to think, you'll be turned into a zombie (his own words) and warn us that it's been done already in the Rwanda genocide.

What the English translation doesn't mention is that Dr Gilbert is also talks about concentration camps being built to incarcerate those who refuse to be part of their 'program'.

“The vaccines will have liquid crystals that will become hosted in the brain cells, which will become micro-receivers of electromagnetic fields where waves of very low frequencies will be sent.”

“And through these low frequency waves people will be unable to think, you'll be turned into a zombie.”

“Don't think of this as a hypothesis. This has been done. Think of Rwanda,” he added, suggesting this technology was behind the 1994 Rwandan genocide.

The psyops slogan from the WEF now makes sense: ***"In 2030, you'll own nothing and you will be happy"***, because you will have been turned into a zombie (those who submit and comply at least).
